

# Huawei QSFP-100G-CWDM4-Lite Optical Module Datasheet

Optical modules are optoelectronic devices that perform photoelectric and electro-optic conversions. The transmitting end of an optical module converts electrical signals into optical signals, while the receiving end converts optical signals back into electrical signals. Optical modules are classified by their packaging forms, with common types including SFP, SFP+, SFP28, QSFP+, QSFP28, QSFP56, QSFP-DD, QSFP112, and OSFP.

Huawei offers a comprehensive series of pluggable optical modules in the Huawei portfolio. The wide variety of modules gives you flexible and plug-and-play options for all types of interfaces. These compact optical transceivers offer a convenient and cost-effective solution for short reach interconnections in the data center.
