# **NUVASAFE**

### PYRUS ALARM TRANSMITER SERIES

- The only triple path alarm transmitter in the market, specially designed for FIRE control panels, also can work with Intrusion alarms.
- Anti-jamming by means of LORA and NB-IOT
- Certified alarm trasmitter at grade 3
- DP4 as per EN50136-2
- X type as EN50131-10 , IP65 housing.
- EN54-21 certification on progress.
- Connection with Fire alarm control panel by means of R\$485 / R\$232 depending on models.
- Bidirectional with alarm control panel by means of Virtual comport
- State of the art **cloud system**, for configuration and monitoring of the devices.
- Global VPN SIMCARD included
- extended IOT control, datalogging and monitoring functions, unique in the market

#### Models

- PYRUS-GLW: Triple path ATS with WIFI + GPRS + LORA.
- **PYRUS-GL**: Dual path ATS with GPRS + LORA.
- PYRUS-TL: Dual path ATS with GPRS + NB-IOT
  + LTE-M1 + LORA.

### **Technical features**

- 3 input NO / NC / EOL.
- Two open drain outputs
- 6 ... 30Vdc input voltage.
- Very low consumption: 10mA @ 24V
- Optional internal battery backup.
- Tripe technology modem, with EGPRS, NB-IOT and LTE-CAT-M1
- Modem WIFI 802.11g
- LORA radio transceiver with NIOT-MESH and LORAWAN.
  - barnds 868-870 Mhz.
    - Nominal: 869.525Mhz / 17dBm
  - Frecuency hopping.

#### Bi-directional communications.

- The device can stablish bi-directional communication with the associated control panel by means of Virtual Comport simulation ( VCOM ) the integrated and tested control panels are:
- VCOM: DETNOV, NOTIFIER

## **NUVASAFE**

#### WIRELESS RADIO

where available there is option for LORAWAN low power radio tracker.

# INNOVATIVE FEATURES:

In combination with other devices of Nuvathings ecosystem, a full range of IOT and industry 4.0 system can be achieved with options for:

- BLE asset tracking
- EDGE alarm triggers processed in the device.
- GPS machinnery trackers.
- Cold chain monitoring
- Security and access control.
- Custom devices available on request.

### LORA - MESH and LORAWAN

- The PYRUS and CIRRUS alarm transmitters can transmit over 4 different paths, integrating in a single device up to 3. The devices form a LORA-MESH network between each other, this network it is full bidirectional without need for configurationa and its management it is carried from cloud, Lora coverage can be checked in a Google maps view with heat maps.
- The LORA transmission provides the **anti-jamming** function, and even more, it provides an extra safety for the communications against Cellular or LAN polling failures.
- They can also connect with existing LORAWAN networks such The Things Network, so thanks to its network diversity it increases the chance to have LORA service, the following image shows the combined network created from LORAWAN TTN gateways and the CIRRUS deployed devices.

### NB-IOT and LTE-CAT-M1

NB-IOT it is a new technology supported by many network operatos and available in many countries in Europe. Its better feature desite of its low operation power, it is the coverage, NB\_IOT offers a link budget of 164dB,thus offering the chance to connect any alarm control system despite it is located deep indoors such parkings cases. These technologies have continuity in the 5G, in fact they are called "Massive IOT 5G". the picture above shows NB-IOT and LTE-CAT-M1 coverage improvement compared to 4G.
